TENURE STATUS BY INCIDENT

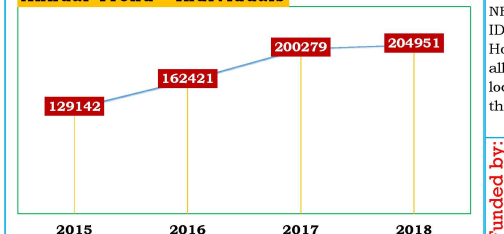

EVICTING ENTITY TYPE

INCIDENTS BY REASON VS INDIVIDUALS AFFECTED

Annual Trend - Individuals

LIMITATIONS

In support of the HLP Sub Cluster and the Protection Cluster, a team of paralegals leveraging robust local networks are deployed by NRC to monitor and document eviction incidents across Somalia, mostly in urban areas with high concentration of IDPs. Each incident is verified through onsite interviews with the affected populations, including settlement leaders. However, although the statistics contained in this dashboard is a fair representation of major trend, it does not reflect all eviction incidents in Somalia, particularly small-scale incidents occurring at household levels and/or those in locations without NRC's operational presence. Plus, the total figure in terms of persons could be more or less because the number of individuals is estimated using the standard household size of six.
